New syntax for latest aws elb configure-health-check

Carl · Lecture 39 · 2 years ago

The latest version of aws elb configure-health-check does not like the double quotes. This should work if you have a issue:

```
aws elb configure-health-check --load-balancer-name dockerzon-web \
--health-check Target=HTTP:80/health_check,Interval=30,UnhealthyThreshold=2,HealthyThreshold=10,Timeout=5
```
